

Worksheet

No.2 Garbage problem

★First let's learn the contents of the page!

- The number of incinerators is the world's number, and at one time there were two-thirds of the world.
- A large amount of dioxin was generated from the incinerator, but now it is reduced by about 98%.
- Under the current Japanese environment, health damage is not expected to occur.
- The number of incinerators in Japan and the amount of garbage are decreasing year by year.
- We can do "3R".

Let's think about it.

One of the things we can do to improve the garbage problem is "3R". Apart from 3R, what kind of things can we do?

On the next page, there is a free writing column.

★Free writing column

★Let's review

(1) Because Japan is , the number of incinerators is the world's number.
