6. Observation

They seem to not know what to talk at first but when the staff sent some topics, they chose some questions and asked the foreign student. When one student asked a question, other students asked after that but once the silence has continued it seemed to be hard to start talking. The conversation didn't last long per one question but instead of that they asked many questions. They asked many easy questions that they learned at school (favorite food, favorite color, what they will do tomorrow) and we think that they chose some topics that are hard to be developed. Also, after the foreign student answered they replied with "thank you" most of the time so it sounded businesslike more than a casual conversation.
